

Delivering value through packaging

ABOUT US

HAMER is a European company founded in 1980 by the Schiess family of Swiss origin. It is currently run by the second generation together with a team of experienced professionals dedicated to providing solutions to your packaging needs.

Our first steps in automation...

MEDIDOR PARA EL LLENADO DE GARRAFAS
 SISTEMA POR VASO Y SONDAS PARA LAS DIVERSAS MEDIDAS CON UNA BOMBA PARA EL LLENADO DEL VASO Y UNA BOMBA PARA EL LLENADO DE LA GARRAFA

MAQUINA PARA DESCAPSULAR BOTELLAS RECUPERADAS

MEDIDOR PARA EL LLENADO DE GARRAFAS
 SISTEMA POR CONTADOR DE DISCO OSCILANTE Y DETECTOR POR INFRAROJO DE LA AGUA PARA LA PRESELECCION

MAQUINA PARA LACRAR BOTELLAS DE CAVA
 CON LA PRIMERA PALANCA SE DOSIFICA EL LACRE CALENTE, CON LA SEGUNDA PALANCA SE TIENEN EL LACRE CALENTE

Origins and history:

- Manufacture of blister and thermoforming machines
- Second generation
- 40 years of history

Sales in the World from 2014 to 2018

BLISTER BPC 25H / 35H

Automatic line machine suitable for manufacturing face-seal blister, full-sealed blister, full plastic blister and blister to blister. These machines integrate all operations needed to manufacture a blister package, from forming the blister, loading of the product and sealing, to trimming operations.

RETAIL BLISTER BPC 23

The BPC23 integrates all the necessary operations for the manufacture of the blister, from the thermoforming from a plastic roll, through the loading of the product, sealing, individual punching of each of the figures and expulsion of the finished blister.

RETAIL

HC63

Carousel type blister heat sealing machine HC63 is suitable for the manufacturing of face-seal blisters (blister to a single backing card) or trapped blister (sealed between two cards)

INDUSTRY

FV35R

Automatic vacuum thermoforming machine with separate stations for thermoforming, die-cutting and vertical stacking of the final product in a conveyor belt

INDUSTRY TVP35

The thermoforming machine is fed from a plastic roll. The film is heated in the heating module until it reaches the appropriate temperature depending on the type of plastic and then goes to the moulding station, cutting and finally, the pieces finishes in the vertical stacking station.
