

AccuPack Series

Automatic Form, Fill, and Seal Systems

Key Features:

- Volumetric Filling Module complete with a hopper, piston and a dispensing nozzle
- Side vertical heated sealing module adjustable from 30 MM to 90MM
- Top and bottom horizontal heated sealing modules adjustable from 30 MM to 90MM
- Cutter module for “easy-rip” open tab and packet separation
- Advanced touch screen controls for easy setup and management
- Solid heavy duty sanitary stainless steel construction for years of trouble free service

Options:

- Horizontal sealing line dye (Checkered or Horizontal Line)
- Flex film date coding on any packet location
- Extended hoppers and float kits
- Three seal change part set
- Auger powder granule filling module
- Casters

AccuPack Series

Automatic Form, Fill, and Seal Systems

The Per"form"ance Fill and Seal

The AccuPack Series Form, Fill, and Seal machines are the idea equipment for the forming, filling, and sealing of single use plastic pouch packages such as ketchup, lotions, shampoo, or soy sauce. AccuPack systems are also capable of filling powdered products with an optional auger filling module examples include chili powder, spices, and powdered drink mixes. Each system is constructed of stainless steel with all contact parts made of 316 sanitary stainless steel. Utilizing a PLC control system with color touch screen interface Accutek insures that each of the AccuPack Systems are easy to set up and maintain trouble free operation at speeds up to 100 PPM. Filling ranges of 8-60mL within packet lengths of 30-180mm and widths 30-90 are within the capabilities of the AccuPack Series Form, Fill and Seal machines.

The packaging process begins when heat sealable film is drawn into the machine and positioned to form a pouch. Once in position the film is sealed on each side and bottom to form the lower part of the packet. This open packet is moved to the filling station where a metered amount of your product is dispensed. Each packet then advances to the final sealing area for top end sealing. Any date/lot code embossing is also completed during the top sealing operation. Once the packet is completely sealed they receive their "Easy-Rip" open tab and final separation cut. Each AccuPack system delivers this per"form"ance, fill and seal process continuously through out the work shift making it a solid addition to any packet packaging line.

Recommended products this machine can fill;

Catsup, mustard, relish, salad dressings, mayo, condiment sauces, peanut butter, soap, shampoo, creams, silicone, and many other similar consistency products. (With Auger filling module; sugars, chili powder, spices, powdered drink mixes, and other granular products.)

Dimensions:

Length: 57" (145 cm)
Depth: 33.5" (85 cm)
Height: 98.5" (250 cm)

Weight:

Approx. ~1335 lbs. (605.5 kg)

Filling Speed:

Up to 110 PPM

Filling Size:

8-60 mL

Electrical:

220 VAC, 3 Phase, 50 Hz

Film Specifications:

Film Width: 20 – 90 mm
Film Thickness: 0.4 mm
