

Tare-Gross Checkweigher

to verify the results of a counting machine

TC 8210 Tare-Gross

the best way to weigh

- **easy-to-use operation via colour touch-screen display**
- **different password protected levels**
- **customized design of the operator interface**
- **easy and quick changeable parts**
- **high-end weighing cells**
- **easy and quick integration in existing production lines**

With the TC 8210 Tare-Gross each container is weighed before and after filling. The actual content is measured with high accuracy and weight deviations of the containers are eliminated. In conjunction with a counting machine, the combination of two different systems (counting and weighing) provides the maximum certainty to exclude an error. The machine also can be integrated in an existing line. In the development phase we work closely with our customers to solve extraordinary tasks. In a personal meeting we work out the ideal configuration of your machine together with you.
