

# CM SERIES

LID APPLICATOR

**CM** Platform encloses extremely innovative machines for the application of plastic lids on wet wipe packaging.

These precise lid application systems operate on the individual packets of wipes as stand-alone solutions in the packaging machines, adapting the lid to the position of the package/film in order to obtain uniform placement of the lids on the packages.

## CM100

Stand-alone lid applicator can be assembled in various configurations for maximum versatility and performance. This machine can reach **up to 95 packs/minute** in its high-speed version, with a space-saving design. Changeover is extremely fast, thanks to retrievable recipes in the HMI and versatile lid magazine, which requires a few minutes to adapt to a different lid shape. Precision in placement is a key feature of CM lidder.

## CM150

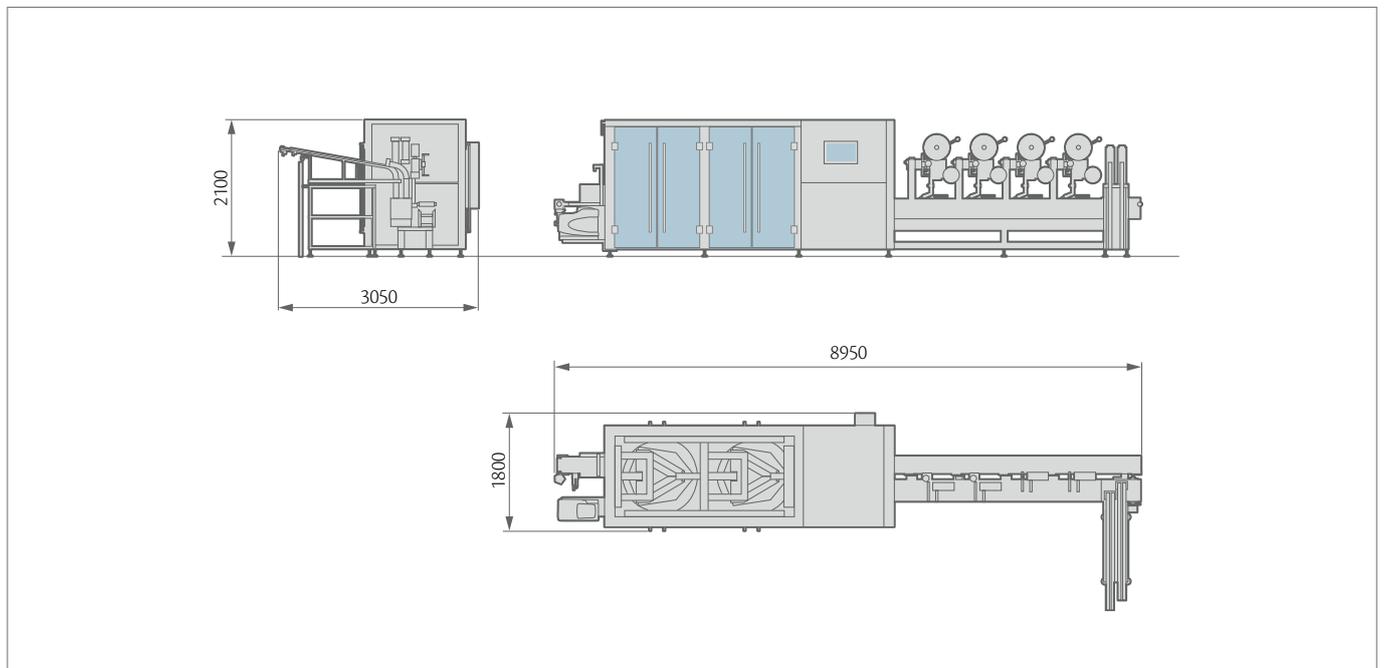

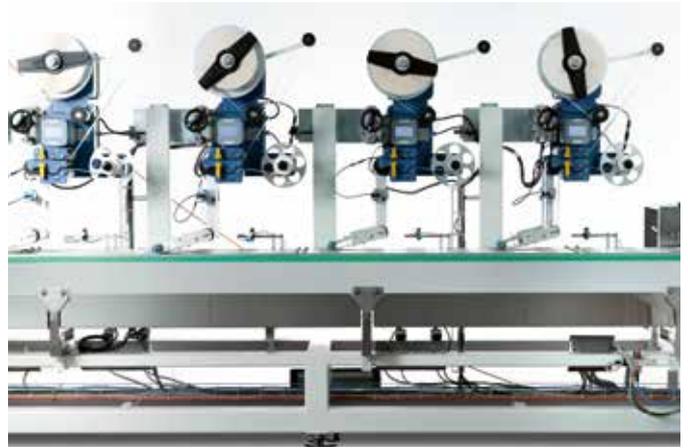

Stand-alone lid applicator that can reach **up to 150 packs/minute**, answering at best to the need for speed combined to extremely efficient production.

Two lid feeding lanes showcase maximum flexibility and versatility, adding functions that standard single lanes cannot reach. CM150 comes with two robots, completely independent, with single picking head for outmost placement precision ( $\pm 1.5$  mm).

Both versions are equipped with top class 4-axis Delta Robot and a reduced arm backlash, ensuring low vibration frames for more precision during the lid application. The intuitive HMI (Human Machine Interface) allows easy management of artificial vision system.

**CM** machines ensure high efficiency with a very low scrap (<1%), requiring just one operator for the correct functioning of the line.

# TECHNICAL DATA

	CM100	CM150
	up to 100*	up to 150*
Lid infeed	Single	Double
Robot	1	2
Suction cups for robot head	2	2
Pack length (mm) min/max	80 290*	80 290*
Pack width (mm) min/max	50 150	50 150
Pack height (mm) min/max	5 100	5 100

\* Depending on lid shape and pack size
