

PET-View

Preform and container inspection - directly in the blow moulder

 KRONES

Safe blow moulding process, immaculate bottle quality

You want to make sure that only faultless preforms enter the blow moulding process? You also want to make sure that only faultlessly blow-moulded bottles are fed to the filler afterwards? PET-View grants both. The inspection system checks both, preforms and bottles using various quality criteria and systematically rejects faulty material.

Whether these are being processed on a stretch blow-moulder for the first time or repeatedly is irrelevant: Because PET-View applies the same thoroughness to virgin material as well as to preforms and containers made from up to 100 percent recyclate.

At a glance

- Inspection of preforms
- Inspection and quality testing of bottles that have just been blow-moulded
- Equally suitable for virgin and rPET
- Wide range of inspection criteria
- Integration into the blow moulder
- Operation via the blow moulder's touch-screen panel

Overview

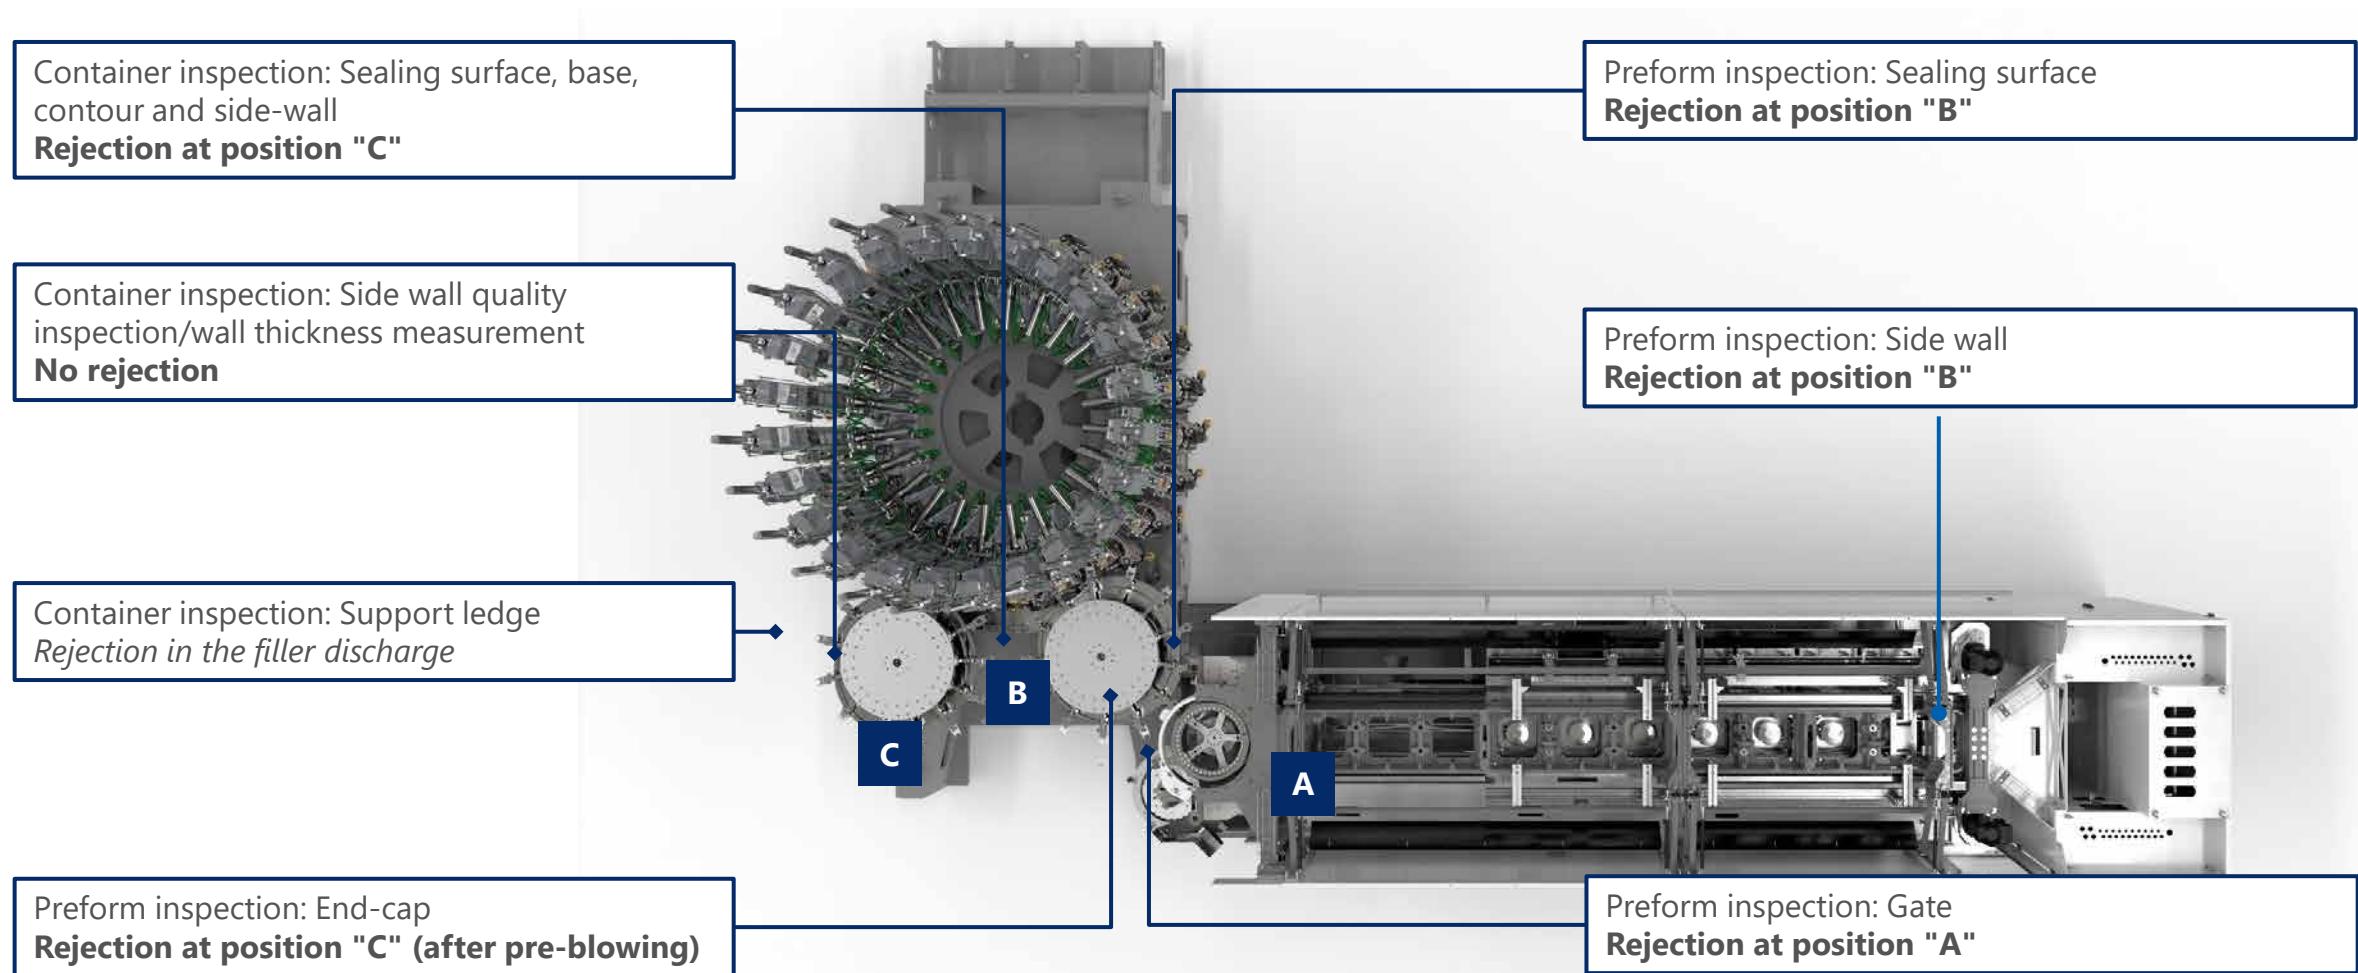

What are the optional functions?

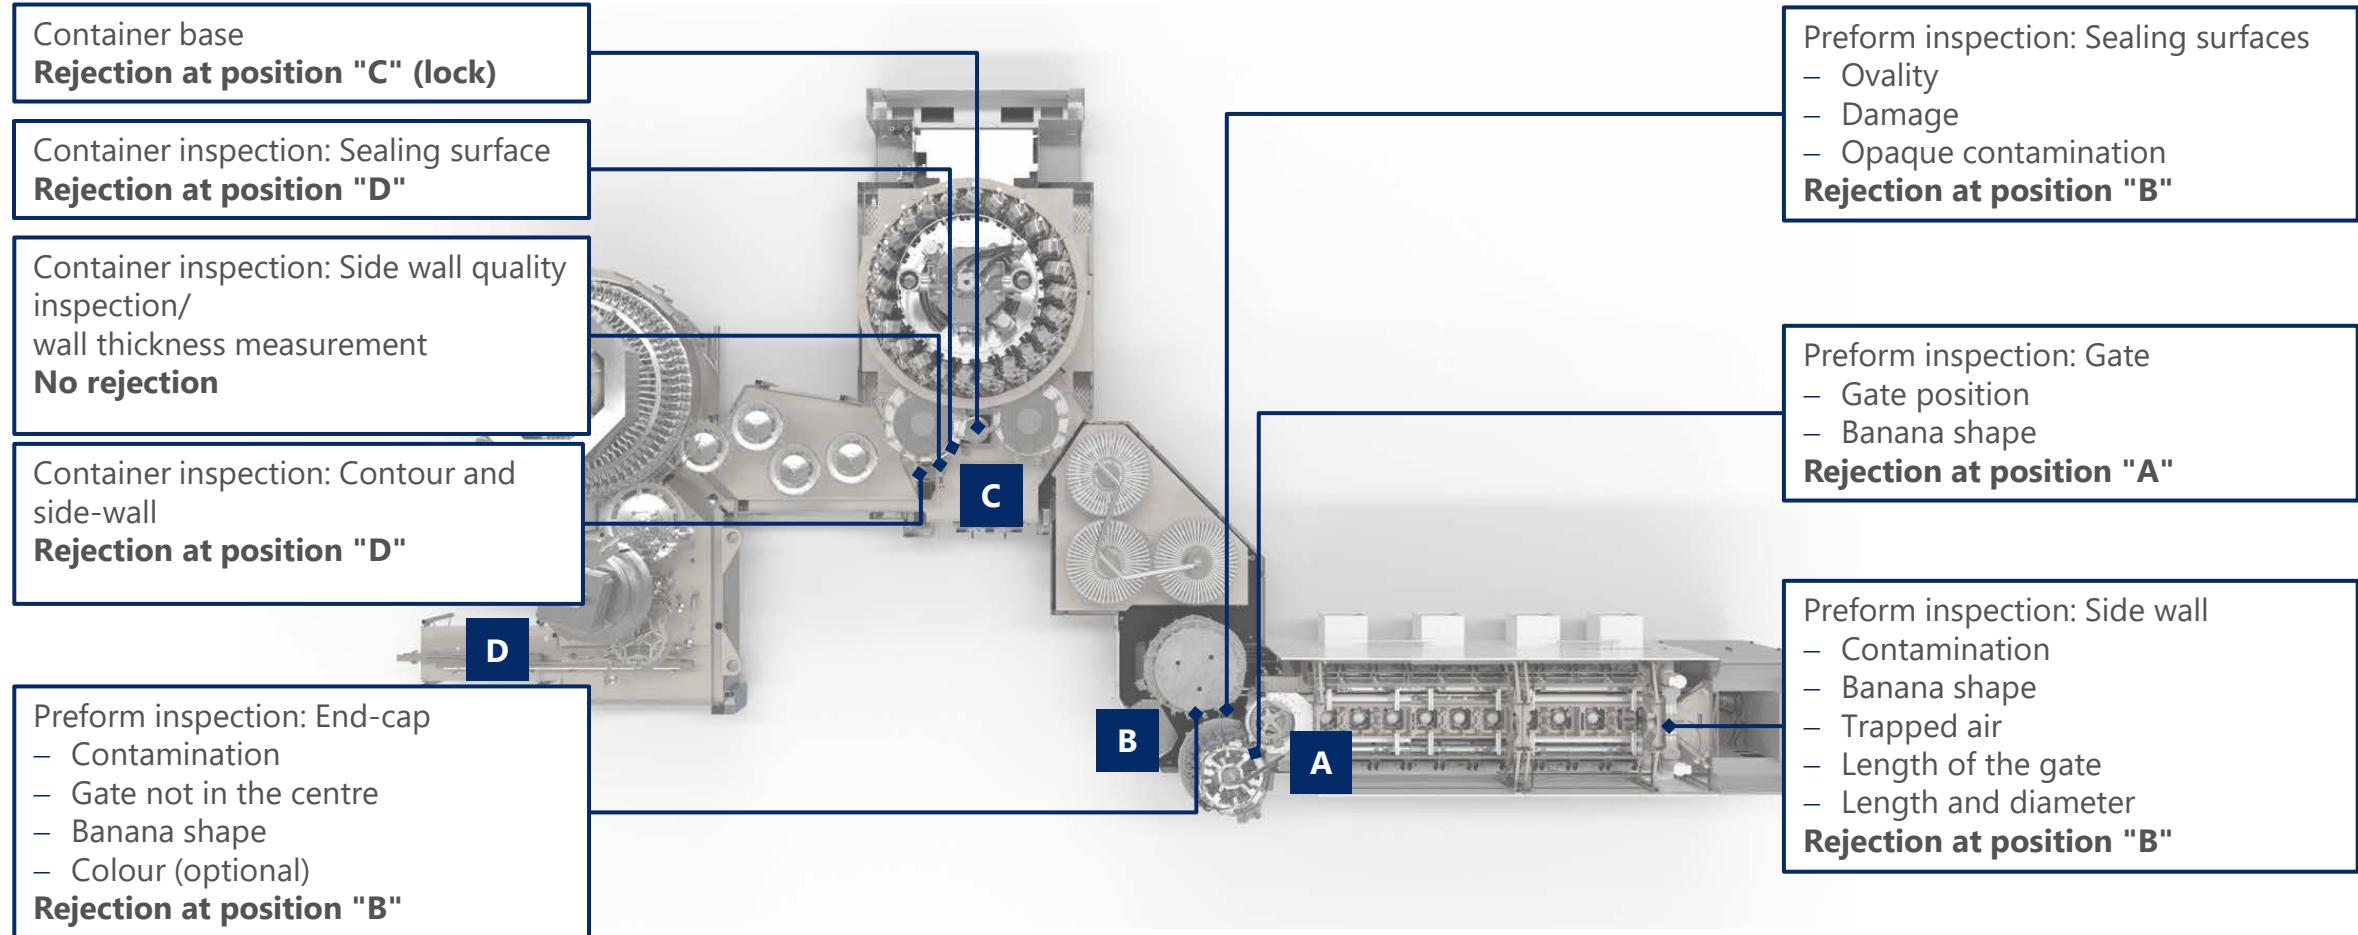

For preforms	Inspection criteria	For containers	Inspection criteria
360° side-wall	<ul style="list-style-type: none">– Contamination– Banana shape– Trapped air– Length of the gate– Length and diameter	Sealing surface	<ul style="list-style-type: none">– Ovality– Damage– Opaque faults
Sealing surface	<ul style="list-style-type: none">– Ovality– Damage– Opaque faults	Base	<ul style="list-style-type: none">– Opaque faults– Position of gate (centre)– Holes– Cracks at the gate– Pearlescence and turbidity
End-cap	<ul style="list-style-type: none">– Contamination– Gate not in the centre– Banana shape– Colour	Contour and side-wall	<ul style="list-style-type: none">– Contamination– Fogging– Contour
Gate	<ul style="list-style-type: none">– Gate position– Banana shape– In wrong position	Support ledge	Damage
		Wall thickness	Material distribution in the side-wall

Overview

Remarks

- No 360° inspection area
- The inspection area is valid for the faults in the transparent area of the bottle side facing the camera.
- The minimum detectable fault size may be larger for faults on the rear side of the bottle.
- Moisture, steam in or on the container may affect the inspection result negatively.

Damage

Container inspection

Side-wall quality inspection/wall thickness measurement

Inspection criteria

Inline measurement of the container wall thickness

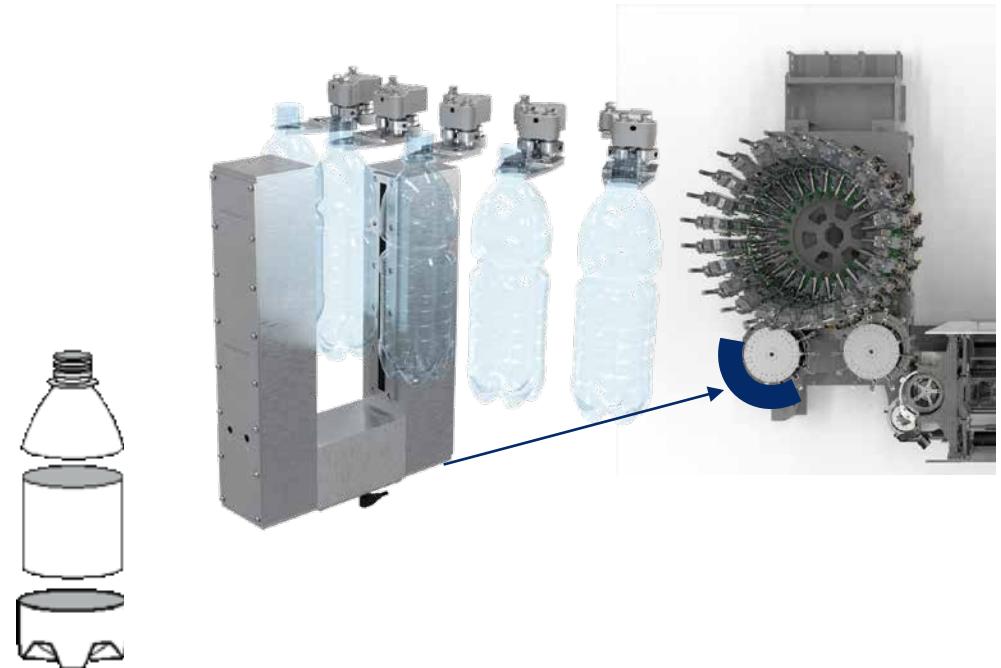

Inspection of the material distribution

Benefits to you

- Permanent quality monitoring of the container
- No random sampling necessary in offline operation
- Independence from preform material properties (virgin PET or rPET)
- No calibration necessary

Remark:

The data is displayed on the HMI and a warning is given if the measured values are outside the defined range.

Wall thickness measurement:

Tests the absorption behaviour in the infrared spectral range

Container inspection

Side-wall quality inspection/wall thickness measurement

Technical features

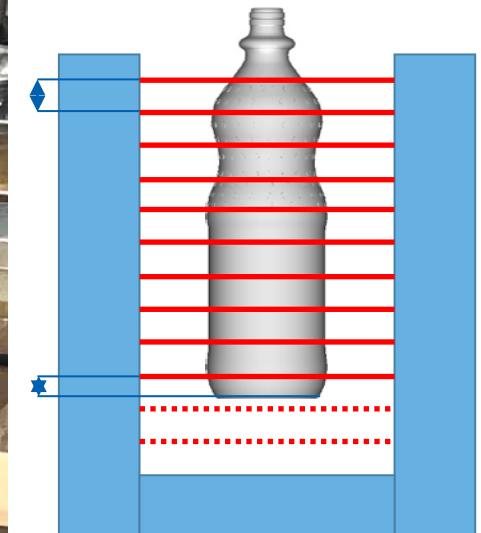

4 to 32 infrared sensors

Two measurements per sensor, min. 10 mm grid

No container rejection, no data storage

Set-up without active
blow-moulder control

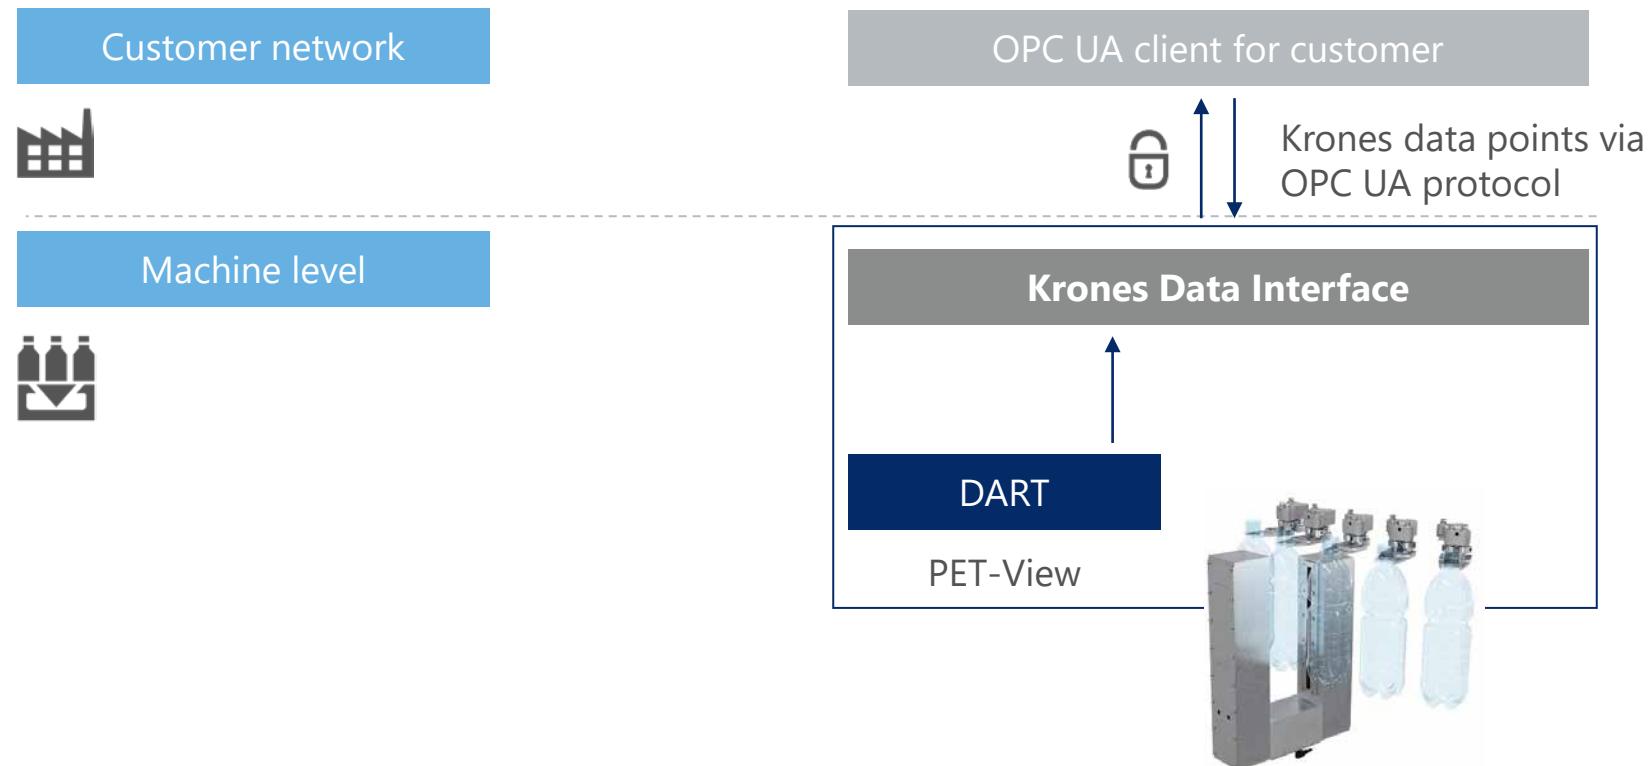

Data transfer

Krones Data Interface

The data is transmitted via the Krones Data Interface into the customer network. A client server is required on the customer side to store the large amounts of data.

Benefits to you

Excellent bottle quality

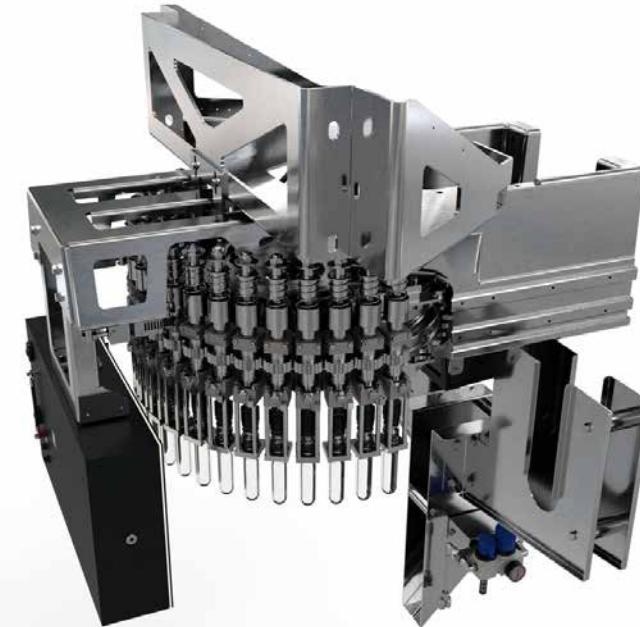

PET-View systematically rejects faulty preforms and PET bottles and thereby ensures first-class container quality.

Trouble-free blowing process

The inspection system enables only faultless preforms for blow moulding. It thereby protects the blow moulder from malfunctions and enables a smooth bottle production.

Comfortable and efficient access

The system can be completely operated via the blow moulder's touch-screen panel.

Requesting a new machine

You can easily send a request for a non-binding quotation in our Krones.shop.

Everything from a single source

Training sessions at the Krones Academy – trained personnel for an increased efficiency of your line

The multifaceted offer by the Krones Academy ranges from operation, servicing and maintenance courses through to management training. We will gladly also create your individual training programme.

Krones Lifecycle Service – Partner for Performance

It goes without saying that also after the purchase of new machines, Krones takes care of your lines: The Krones LCS experts are always there to help you reaching your goals and turn your wishes into optimal LCS solutions.
