

# Reel Scalper

## Improve your process with a Scott Reel Scalper

The Scott Reel Scalper is used to screen the product and remove oversize materials either before or after the mixer to maintain a clean finished product.

- Achieve smoother, cleaner batches of finished feed with dry products and liquid additives.
- Capacities of 10 to 175 tons per hour of ground feed; 2,000 to 20,000 bushels per hour of grain.
- Low horsepower requirement from 1 HP to 7-1/2 HP, depending on the size of the reel scalper
- Removable top cover with collection hoppers for product and fines

The equipment is constructed of heavy gauge material, either in mild or stainless steel. The hardened wire screen mesh is available in various sizes, and replaceable screens are available in sizes from 56 ft to 220 ft.
